

NULA DeepSleep ESP32-S3

The NULA DeepSleep ESP32-S3 is a low-power development board with 7 μ A deep sleep current, ideal for battery-powered IoT applications.

Suits battery-powered projects that spend most of their time asleep — sensors, trackers, remote monitors.

Key specifications

Microcontroller	ESP32-S3
Mcu Clock (MHz)	240 MHz
Wifi	Wi-Fi 4 (802.11n)
Bluetooth	Bluetooth Classic + BLE
Supply Voltage	3.3 V or 5 V
Sleep current	16 μ A

Getting started

Connect it to your computer with a USB-C cable, then flash it using the Arduino IDE, MicroPython, or ESP-IDF.
